### REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

No prior art of record or combination thereof teaches an inductor assembly having at least one coil of insulated conductor defining an inside volume; an inner magnetic core located within the inside volume; “and an outer magnetic core having top and sidewall portion overlying the coil and inner core and having opposite inner wall portions facing polar ends of the coil and inner core such that at least two magnetic gaps exist between the ends of the inner core and the opposite inner wall portions of the outer core”.

Closest related art found was U.S. Patent Numbers 6,392,519 to Ronning and U.S. Patent Number 3,255,512 to Lochner, et al.

Ronning discloses a structure having an inner core with a winding and an outer cup structure surrounding the core. However, the outer structure is not a magnetic core material, therefore it would perform a distinct and different function than that of the applicant.

Lochner, et al, discloses an electrical device having an inner magnetic core comprising a winding wound thereabout, and an outer ferromagnetic casing having top and sidewall portions. However, Lochner, et al, does not teach at least 2 magnetic gaps located between the ends of the inner core and the opposite inner wall portions of the outer core/ferromagnetic casing.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled “Comments on Statement of Reasons for Allowance.”
